

SJ (Seongjun) Kim

- Software Engineer (Backend & Platform) + MSEE with 6 years of experience.
- LinkedIn Profile: <https://www.linkedin.com/in/bus710/>
- Carlsbad, CA, 92010

Experiences

Twitter - SDE III (Sep 2022 - Jan 2023)

- Worked as a software engineer in the audio space team.
- Developed Go based static analyzer tools to manage annotations of DB queries in Go source codes for private information management in AWS DBs (DynamoDB, Kinesis, and SQS). Managed CD/CI to add the tools as a part of developer workflow and pipeline. Wrote bash scripts to filter log streams to narrow down possible issues in transactions.

Egnyte - SDE III (Jan 2021 - Jul 2022)

- Worked as a software engineer in the Migrations team.
- Developed Go based cloud services to interact with several types of clients to migrate data in AWS/GCP storages. Wrote client apps(react/svelte) and scripts for internal tests to interact with file sync services. Utilized Elastic-search and Kibana for event tracing. Involved containerization/orchestration tasks to help DevOps and Core storage services with tools such as Docker/K8S/Terraform.

HP Inc. - SDE II (May 2019 - Jan 2021)

- Worked as a software engineer in the Retails solution team.
- Developed Go based cloud services for integrated customer services of retail stores. Utilized several stacks for precise message transfer(REST/Websocket/gRPC/MQTT/Kafka/RabbitMQ) as well as containerization/orchestration tools for microservices and Event Driven Architectures in AWS. Developed React Native apps for Android POS machines.

Legrand-Wattstopper - SDE II (Carlsbad, CA / June 2016 - May 2019)

- Worked as a firmware/software engineer in the Lightings device team.
- Developed STM32 and nRF52 based real time projects by using C. Worked on board bringing up for RTOS and BLE projects. Improved the protocols between high and low level systems as JSON to boost the communication efficiency. Developed test automation utilities with Go/Docker and internal GUI tools with React/Electron.

ABOV Semicon (and others) - SDE I (Seoul, Korea / Apr 2011 - Apr 2014)

- Worked as a firmware engineer in the field service team.
- Developed ABOV's MCU based software by using C for automotive and digital appliance products. Designed digital circuits with 8 bit and 32 bit MCU system.

Educations

Master's Degree, Electrical Computer Engineering

- **California State University, Los Angeles** (CA / Sep 2014 - Feb 2016)
- Thesis: Parallel Processing of an Epipolar Geometry Algorithm on an FPGA Fabric Using OpenCL.
- GPA: 3.8

Bachelor's Degree, Electrical Engineering

- **Seoul National University of Science and Technology** (Seoul, Korea / Mar 2006 - Feb 2010)
- Lab Activity: Project Integration Using ARM Based Linux System and AVR Microcontrollers for Industrial Applications.

C# Online Courses

- **University of California San Diego** (CA / Dec 2017 - Dec 2018)
- Learned several topics from the basic syntax to the usage of ASP.net.

Free/Open Source Software Projects

Golang + VSCODE Development Environment Setup

- <https://github.com/bus710/golang-dev-env-setting>
- Emerging high performance programming language, Go's installation, kicking a project off, IDE setting, and debugging.

Matrix2 - a toy project for Sense Hat with Go/Flutter app

- <https://github.com/bus710/matrix2>
- A toy project that provides its Flutter/web front-end and Go server to control the LED matrix of Sense Hat

Zephyr RTOS Development in Linux

- <https://github.com/bus710/zephyr-rtos-development-in-linux>
- A tutorial to install Zephyr RTOS development setup in Linux
